Dear Hiring Manager & Engineering Team,

I am writing to express my strong interest in joining your engineering team as a **Frontend / Full Stack Software Developer specialized in Angular and TypeScript**. With a proven track record of architecting and shipping production-grade multi-tenant SaaS platforms and transactional web applications, I focus on combining clean, maintainable code with high-conversion user experiences.

In my role as Co-Creator & Frontend Software Developer at **Vertex Solutions**, I helped engineer a multi-tenant white-label SaaS e-commerce platform built with **Angular 22 (100% Standalone Components and Signals), Node.js, Firebase Cloud Functions v2, Firestore, and Zod**. I delivered key revenue-driving features including dynamic per-variant product pricing, automated bank transfer discounts, **Mercado Pago API** checkout integration with atomic inventory deduction, a client-side HEIC/HEIF to WebP image optimization pipeline, and multi-tenant dynamic Open Graph SEO for social crawlers.

Additionally, I architected and built **GEO Tracker**, a high-performance **Server-Side Rendered (SSR)** web application enforcing `ChangeDetectionStrategy.OnPush` for mountaineering expeditions across Patagonia and the Andes. I designed a signal-driven booking engine featuring a dual payment model (credit card installments and discounted bank transfers with a 2-hour temporary *"Soft-Lock"* slot reservation and receipt verification workflow), alongside a 4-module administrative backoffice and live CMS.

What I bring to your engineering organization:

- **Modern Angular Mastery (v17–v22):** Deep proficiency in Standalone Components, Angular Signals (`signal`, `computed`, `effect`), native Control Flow (`@if`, `@for`), RxJS, Angular SSR, and `OnPush` performance tuning.
- **Full Stack & Serverless Execution:** Hands-on experience integrating Node.js, Firebase (Firestore multi-tenant data modeling, Google OAuth & RBAC Custom Claims, Cloud Functions, Storage), payment gateways, and shared Zod schemas.
- **Engineering Quality & Agile Delivery:** Accustomed to strict quality gates, GitHub Actions CI/CD pipelines, automated testing suites (Jasmine/Karma, Vitest, Cypress, Playwright), and Agile Scrum/Kanban workflows.

I would welcome the opportunity to discuss how my background in building scalable Angular applications and SaaS products can contribute to your team's goals. Thank you for your time and consideration.

Sincerely,

Lihue Nicolas Leiva
Frontend / Full Stack Software Developer
